

Meet The **GRAD STUDENT** **Julianna Hoza**

What most excites you about your field?

I am most excited to get to work with adorable critters like amphibians and beavers. Working toward restoration-based climate solutions is also an exciting prospect.

Where did you move from?

I moved from Seattle, WA, although I had been working seasonally in Utah most recently.

- Piovia-Scott Lab
- Vancouver Campus

Life before grad school:

I was working seasonally for the Forest Service as a wildlife technician in between school years at the University of Washington, where I just completed my B.S. in Environmental Science and Aquatic & Fishery Science.

Fun fact

I live in a built-out van (ask me all about 12v electricity, composting toilets, and water storage systems)!

Can't live without:

Granny smith apples with peanut butter.
